- ✓ Road Working Group
- ✓ Micro Logistics and Digitalization Working Group
- ✓ Egean Region Working Group
- ✓ Mediterranean Region Working Group

FOCUS GROUPS

- ✓ Women Logisticians Focus Group
- ✓ Universities Focus Group
- ✓ Green Logistics Focus Group

The Danube River

- A commercially significant non-oceanic water-body
- 2850 km long
- Important for central and western Europe in terms of maritime transportation

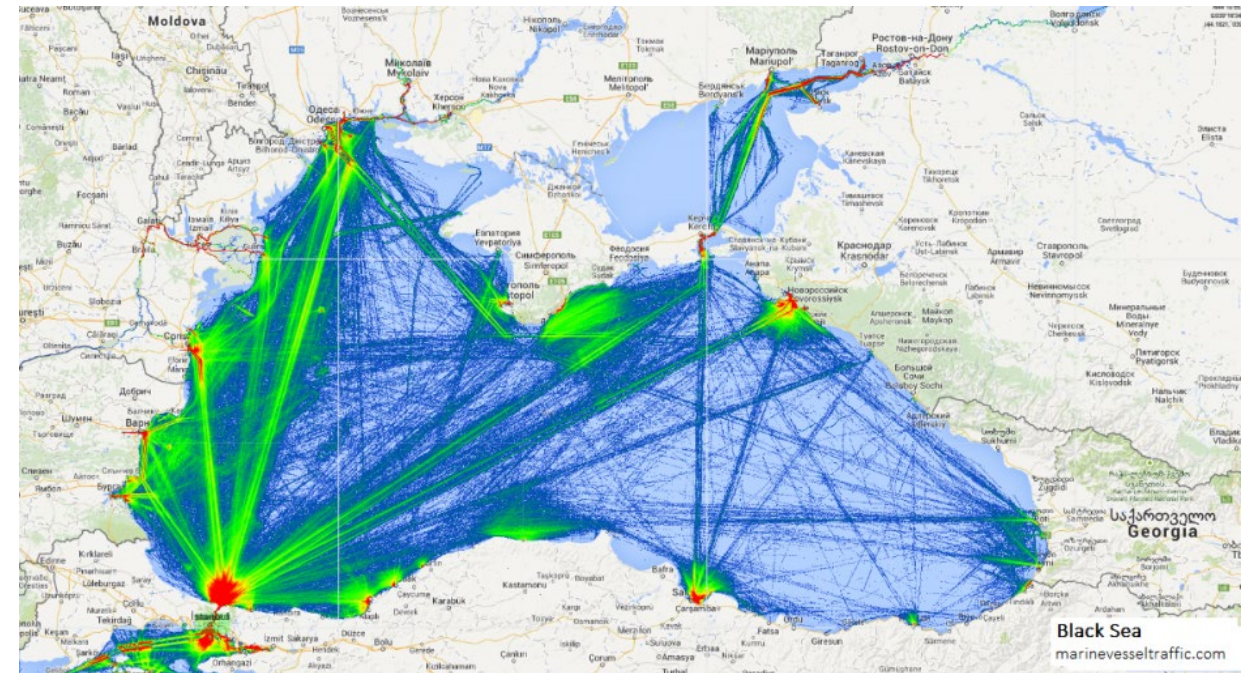

Danube in Transportation

- Danube connects 10 European cities.
- An integral part of Trans European Transport Network (TEN-T).
- Connecting Rotterdam to Black Sea through canal network.

Further Possibilities in Danube

- Heavy freight traffic in Ports of Varna and Constanta due to Ukraine's use of these ports.
- Ports in Danube can be alternatives.
- Danube ports need to have the necessary infrastructure for mine and construction transportation.
- A cost-effective alternative to Gibraltar for turbine and energy transportation, if necessary infrastructure is available.
- Need for increased multimodal capacity
- Modal shift to inland waters.

**Turkish Forwarding And
Logistics Association**

Thank You
